

Assignment

Build a web page that allows a teacher to upload:

1. A **question paper** (PDF or images)
2. One **student handwritten answer sheet** (PDF or images)

The application should extract the questions from the paper, extract the student's answers, and display them side by side.

When a teacher clicks on a question, the corresponding answer should be identified and the **exact region of the answer sheet should be highlighted**.

Important (Scope)

This can include **grading** and AI-generated insights.

The application may include:

- Marks or scores
- Correct/incorrect evaluation
- AI feedback (per question and/or overall)
- A clear grading summary (as per your chosen approach)

Core flow:

Question Extraction → Answer Extraction → Answer Mapping → Grading/Feedback

Requirements

- Upload both files and show processing progress
- Extract every question in the correct printed order

- Treat labelled sub-parts as separate questions

Example: 11 (a) and 11 (b) should be two entries

- Preserve the original question numbering
- Handle questions answered out of order
- Handle unanswered questions
- Handle answers that don't match any question
- Highlight the exact answer region on the answer sheet
- Allow answers to span multiple pages where required

Design

A Figma design has been provided as a reference for the expected interface and overall experience.

Figma Design: <https://www.figma.com/design/GEjt1rt1s7AXvkr4t8muE/VedaAI-Hiring-Assignment?node-id=0-1&t=Dv2LriEPmTjljAqe-1>

You are expected to follow the provided design closely while implementing the product.

Technical Constraints

- Any tech stack is allowed
- Any AI model/API with a free tier is allowed
- Next.js is recommended but not mandatory
- No authentication required
- No database required
- In-memory storage is sufficient
- The application must be deployed and accessible through a live URL

Submission

Submit your completed assignment through the following form:

Submission Form: <https://forms.gle/vFXzf3kcLmGougMr5>

Please include:

- Live deployed URL
- GitHub repository
- Brief explanation of your approach
- AI model/API used
- Any important assumptions or limitations

What We Evaluate

We will primarily evaluate:

- Accuracy of question extraction
- Accuracy of answer mapping
- Correct highlighting of answers
- Handling of edge cases
- Quality of implementation
- Overall product experience

The Goal

A teacher should be able to upload a question paper and answer sheet and quickly understand:

Which question was answered, where the answer is, and which questions were left unanswered.
